

Mounting Applications

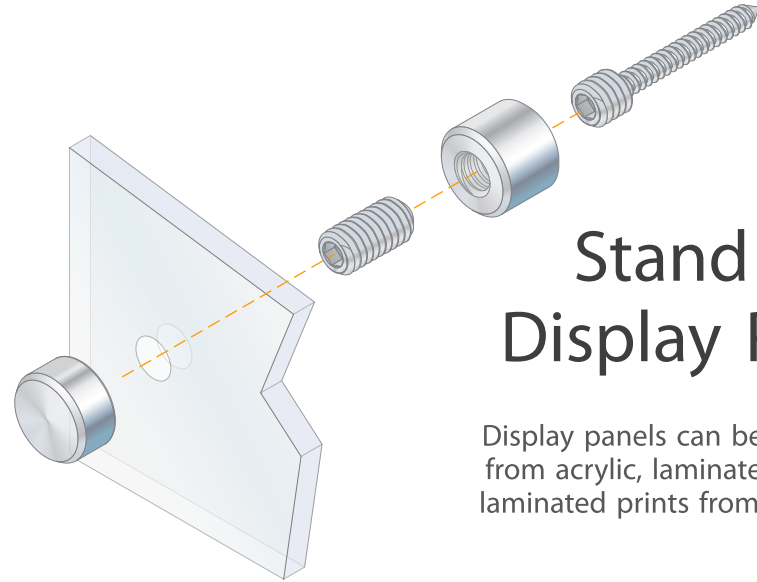

Tape and Silicone is by far the most typical mounting system we use. It is durable and allows the dimensional elements to hug the wall and look as if they are a part of the decor.

Stud mounting is by far the strongest system that we utilize. This is a superior mounting system for exterior applications.

Spacers are also available to stand dimensional elements from the mounting surface.

Stand Off Display Panels

Display panels can be manufactured from acrylic, laminated chemetal, or laminated prints from our print shop
